WHAT WE USED

- Unwanted Change table (ours was 850 wide x 600 deep x 950 high)
- 2 x 2400mm long 40mm x 10mm pine, each piece cut into 1400mm, 600mm and 400mm lengths
- 2 x 900mm lengths of 16mm dowel
- Fabric, 1m-square
- 4 x 6x25mm bolts with wing nuts
- 16mm spade drill bit
- 7mm drill bit
- Resene Paint: Resene Quick Dry sealer undercoat, Resene Lusteracryl in Resene Aqua and Resene Smiles, Resene Blackboard paint in pink and black
- 12mm Plywood, 50mm x 24mm
- Two cup hooks and two eyelets

TO MAKE:

1. Remove castors if your change table has them, and dismantle the table. Measure 600mm up from the bottom of both end pieces and cut the excess part off.
2. Drill 16mm holes in one end of each 1400mm length of pine, and smaller holes (to suit your change table) in the same positions as the shelves. Drill a 7mm hole 215mm from the end with the 16mm hole.
3. Drill 16mm holes in each end of the 600mm lengths. Measure 275mm from one end and drill a 7mm hole.
4. Hem the fabric so finished size is 830mm, with a wide enough hem at one end to fit the dowel through. Place canopy on market stand and pin in place over second dowel - remove and sew another seam large enough to fit the other piece of dowel. Cut and hem the

We will auction this tent on TradeMe from Monday 24 March. 'Toys and Models', 'Outdoor toys and structures'. Proceeds to Starship.

other end so you end up with a 10cm long hanging fringe piece.

5. Paint everything but the two pieces of dowel and the inside of the holes that hold the dowel with Resene Quick Dry sealer undercoat and then two top coats of Resene Lystacryl paint in Resene Aqua.

6. For the blackboard sign, sand both sides and all edges of the plywood, paint a coat of Resene Quick Dry sealer on both sides. Leave edges unpainted. When dry, paint one side with two coats of Resene Blackboard Paint pink and the other with two coats of Resene Blackboard Paint black. Resand edges if any paint bleeds onto them. Drill and attach two eyelets into one of the long

sides. And drill and attach two cup hooks to the undersides of the shelves of your stand.

7. To erect your market stall, attach 1400mm lengths to each of the back sides of the change table by inserting the bolt through the timber and the timber of the change table and into the lower shelf. If the change table's original bolts aren't long enough, replace them with hexagon-ended bolts that are the same diameter but 10mm longer. Repeat this for the upper shelf. Attach the shelf on the front side by inserting the bolt through the change table and into the shelf on each side.

8. Insert dowel into the back seam in fabric canopy and then into 1400mm and 600mm timber pieces on each side. Attach 400mm bracing pieces using the 25mm bolts and wingnuts to secure.

9. Place other piece of dowel through front seam in canopy and insert dowel into holes in the front of the 600mm
