

## Resene VOC summary

Staff in the Quality Assurance Laboratory of Resene Paints Ltd calculate the potential Volatile Organic Compound (VOC) levels in a product from the characteristics and quantities of raw materials used. This calculation is done according to the Australian Paint Approval Scheme (APAS) which defines VOCs as any organic compound included in a paint formulation (either as individual ingredients of the formula or as part of an intermediate raw material), which has a vapour pressure more than 0.01mm Hg at 21°C; or an initial boiling point <250°C measured at a standard pressure of 101.3kPa.

Please note the VOC levels listed below reflect the worst case scenario across the full range of coloured bases available for the product listed. Resene also has a full range of Resene Decorative Colourants with no added VOCs, so all decorative products can be tinted without adding any additional VOCs.

Product	Approx VOC grams Per litre	Also Environmental Choice NZ approved
<a href="#">Resene Acrylic Undercoat</a>	35	Yes
<a href="#">Resene Aluminium Wood Primer</a>	325	-
<a href="#">Resene Aquaclear</a>	95	Yes
