

Once upon a time colour choices seemed to be bound by endless unwritten rules of which colours could be used where and with what, a minefield for the uninitiated.

As our communities have become more global, thanks in no small part to the wonders of modern technology, we can draw inspiration from all over the world from the comfort of our own home or office. This has broadened our outlook on colour palettes and colour combinations, banishing those restrictive colour rules to the history books.

This global inspiration comes together in this The Range fashion colours collection, with an eclectic mix of key colour trends. It's a fusion of colour that you can make your own.

The hues head in three directions; the dusty timeless hues that provide a soft cocoon and remind of us of our heritage, the clean cool light hues that provide soothing relief and tranquility in a fast world and the pops of bright colour that bring fun, excitement and energy.

The world seems to be moving ever faster and we've ever connected. Downtime is becoming a luxury and this is reflected in weathered and worn hues that feel familiar and lived in. Expect to see people disconnecting themselves from the constant noise as they focus more on wellbeing than well connected.

Nature continues to influence with a palette that's infused with earthy, neutral tones - showing our growing appreciation for the earth and its resources. Wood tones are reflected in beiges and browns and offset by a soft golden metallic shimmer. Barely there and mid tone neutrals hint of subtle undertones. Darker neutrals have greater colour depth and intensity.

Layering colours is becoming increasingly popular as a new way to add interest to a space. Rather than one paint colour in an area, imagine stripes of your favourite hues decorating your walls, kitchen drawers each painted a different but complementary hue and brightly painted internal doors, each an infusion of unexpected uplifting colour.

It's time to forget the old colour rules and embrace the endless possibilities of colour. Let your own tastes be your guide and surround yourself in colours that you love - you'll be amazed at just how good it feels to live and work in your favourite colour palette.

Happy decorating!

cc = Also available as a Resene CoolColour™. A change in tone or product may be required for some colours to achieve a Resene CoolColour effect.

u = An undercoat is recommended for the optimum finish.

Note 1: The approximate light reflectance value (LRV) of a colour indicates the amount of visible light that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfaces are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour™ is formulated to reflect more of the sun's energy, improving the colour's heat and total solar reflectance (TSR) properties compared to a normal colour, keeping the coating, substrate and building cooler.

Note 2: Mid to dark colours are not suitable for some exterior substrates and if used may cause damage to the substrate, such as warping, checking and premature failure. Always check with the substrate supplier prior to commencing any work to ensure colour selections fit within their guidelines. Resene also manufactures Resene CoolColour technology and this may increase the colour range that can be suitable over some heat sensitive substrates - refer Resene for further information.

Note 3: Tones listed above are subject to change if colours are reformulated.

Note 4: Colours may be available in selected products or sizes only. Check with Resene ColorShop or Reseller staff to ensure your selected colour is available in the product and/or size you require.

Note 5: This colour chart is finished with Resene SpaceCote Low Sheen waterborne enamel, a product ideally suited to kitchens, bathrooms and broadwall areas.
