

IT'S ALL WHITE

To provide a fresh, environmentally friendly finish in the Club Tower, walls are painted in Resene Alabaster in Resene Zylone Sheen VOC Free

Streamlined simplicity is the order of the day

for modern office interiors, and the Club Tower is no exception. The design team specified walls throughout the interior to be painted in Resene Alabaster – a near white with a hint of black from the Resene The Range Whites & Neutrals fandeck.

Environmental Choice-approved Resene Zylone Sheen VOC Free waterborne low sheen was specified for this project, to provide a visually pleasing low-sheen finish.

Resene has a long history of pioneering moves to more environmentally friendly paints. The company introduced waterborne paints in the 1950s, and undertook the removal of lead in all paints in the 1970s. In 1996, the company took a further step forward, joining

the Environmental Choice programme.

Marketing manager Karen Warman says becoming part of the programme gave Resene the impetus to solve the common problem of headaches caused by strong smelling paint.

The latest development from the company is Resene Non VOC tinters, which enable a full colour range to be tinted free of VOCs, for better air quality. This can help prevent headaches, asthma, nausea, respiratory complaints and allergic reactions. It also provides a better working environment for the professional or amateur painter.

For more information on Resene products and colours, visit a Resene ColorShop, or freephone 0800 RESENE (737 363). Website: www.resene.co.nz.

Below Walls throughout the Club Tower are painted in Resene Alabaster, a near white with a hint of black. Resene Zylone Sheen VOC Free was the paint type specified. This waterborne low sheen provides improved air quality that can help prevent headaches and respiratory complaints.
