

# Screen time

Hide untidy corners with a trellis garden screen that can be removed for easy access.

## You will need:

- 2 panels of expandable trellising (expanded to width and height required)
- Tanalised wood for frame (length required x 45mm x 20mm)
- 4 slats from old wooden blind, or similar
- Resene Lumbersider satin acrylic paint tinted to Alabaster
- Resene Lumbersider satin acrylic paint tinted to Porsche
- Resene Enamacryl
- Metallic paint in Bullion
- 4 square hooks and eyes
- Staple gun
- Frost cloth
- Nails
- Hammer, pliers, drill
- Paint brushes

For more on paints phone 0800 RESENE or visit [www.resene.co.nz](http://www.resene.co.nz)

**1** SPACES beneath decks are dumping grounds for old pots, bags of compost and wheelbarrows. A removable screen will cover the mess and allow for easy access.

**2** MAKE two frames with the tanalised wood to the size of each panel of trellising, and fix with nails.

**3** EXPAND the trellising to fit the frames and place on top, with the back showing. Note: any type of trellising can be used, cut to the required size.

**4** NAIL the trellising to the frames, leaving plenty of room around the frames for the wooden slats and frost cloth to be stapled.

**5** SCREW two eyes to the top of each frame. A simple hook and eye system allows for easy removal of the frames – one or two frames at a time.

**6** DRILL holes into the side of the deck at corresponding lengths to the eyes and screw the hooks into the holes, using pliers if necessary.

**7** PAINT trellis with Resene Lumbersider in Alabaster. Paint the frame with a basecoat of Resene Lumbersider in Porsche, then a topcoat of Resene Enamacryl Metallic in Bullion.

**8** LAY the frost cloth over the back of the trellis, place a wooden slat on the top and bottom ends of the frame, and staple in place. Cut away excess cloth.
